PROFESSIONAL SUMMARY

Machine Learning–focused developer with hands-on experience in building predictive models, face recognition systems, and data-driven applications. Skilled in Python, supervised learning, model evaluation. Strong understanding of data preprocessing, feature engineering. Completing B.Sc. in CSE (January 2026).

TECHNICAL SKILLS

Machine Learning: Python, NumPy, Pandas, Data Preprocessing, Model Training & Evaluation

Tools: Git, GitHub, Google Colab, Kaggle Notebook

Languages: Python, Java, SQL

EDUCATION

B.Sc. in Computer Science & Engineering
Green University of Bangladesh, Dhaka | *CGPA: 70.75%*

Higher Secondary Certificate (HSC)
Hazi Jashim Uddin College, Pabna | *GPA: 4.83*

PROJECTS

Heart Anomalies Prediction (Machine Learning) [GitHub]

- Built ML classification model to detect heart anomalies using patient dataset.
- Performed preprocessing, scaling, feature engineering, and correlation-based feature selection.
- Trained and compared CNN, BiLstm and XGBoost.
- Improved model accuracy using cross-validation and evaluation metrics (ROC-AUC, precision, recall).

Smart Attendance System using Face Recognition [GitHub]

- Developed real-time attendance app using ML Kit face detection recognition.
- Used TensorFlow Lite optimized model for fast and low-latency predictions.
- Automated attendance workflow, reducing manual tasks and eliminating proxy issues.

CERTIFICATIONS

Intro to Machine Learning — Kaggle *Completed on: October 30, 2025*

- Covered supervised ML, model evaluation, data preprocessing, and practical ML workflows.

AI Essentials: Introduction to Artificial Intelligence — Udemy *Completed on: May 26, 2025*

- Learned AI fundamentals, neural networks basics, and real-world AI applications.

Foundations of Agents — Hugging Face Agents Course *Completed on: February 24, 2025*

- Introduced to AI agents, LLM-driven automation, and tool-calling fundamentals.
